A Personal Reflection on COSAC 2018

Richard Gijsbers

This was my eighth Conference on Science and Christianity (out of the eleven we have had) and what a journey it’s been! Alister McGrath on the Bankruptcy of Scientific Atheism, Simon Conway Morris on Christianity and the Origin of the Species, Sam Berry on Christianity and nature, Nancey Murphy on Disenchantment, George Ellis introducing us to complexity and emergence, and so it flowed.

This year’s conference featured Jennifer Wiseman speaking on “The Heavens Declare…”. It was in the same tradition of past COSACs: an international keynote speaker, presentations by ISCASTians representing a range of sciences, lots of discussion and everyone catching up with each other.

But it was different also. It was

- Larger: over 160 people attended!
- Fuller and busier: more than 40 presentations.
- Younger: more than 44 students contributing and thrashing things out with their peers and elders.
- Newer: with many for whom this was their first COSAC bringing enthusiasm and excitement that there were people exploring all sorts of dimensions of science and Christianity.
- More diverse: 30% were women (a small number but growing!) and 8% from outside Australia. The presentations also included more from than just the physical sciences (including two from economists posing as scientists!).

Over 92% of those surveyed thought COSAC was either excellent or very good. Most of the comments related to the diversity: age, gender, cultural background, and theological tradition. For many this was celebrated. For others there was more we needed to do.

In summary, from my perspective:

- Involving younger delegates was great. Chris Mulherin drove this vision hard and it bore fruit. My thanks to the students and young people who came and contributed, as well as to the older ISCASTians who listened, shared and (perhaps) learned from them. This was my #1 highlight!
- The program was packed. Many appreciated this as it meant a wider range of topics. Others wanted more time for networking, changing over, and just chilling.
- We need to develop an agenda that deals with female and non-WASP topics. This has bugged us for years and it is not for want of trying. We need to try some more. At least the complaints mean that there are those there who notice this.
- Theological and ecclesiastical traditions other than for evangelical protestants, particularly in our worship and reflections. It would be tragic (I feel) if we ended up worshipping separately to provide for this diversity. Is it possible to have a satisfying ecumenical service?
- Coping with Young Earth Creationism. All too often YEC is presented as “all or nothing”, and yet so many feel that it is both poor science and poor theology. We grieve at the way this debate is conducted and many on both sides have been hurt. I expect that this is an issue that will remain with us for some time yet.
- The keynote speakers set the tone marvellously! Jennifer’s lectures and those wonderful images of galaxies and nebulae! Enough said. Ken Freeman, Peter Harrison, Jonathan Clarke. My thanks to each of you.

ISCAST (and COSAC) is continuing to evolve but as long as scientists (both eminent and run-of-the-mill), stand up and say: “I am a Christian”, no one can say that you cannot be a scientist and a Christian at the same time!
Some Feedback from COSAC 2018

The comments on this page are samples of the feedback we received, unedited.

Opportunity to meet other Christians who were scientists as well and to hear where science may have been adding support to the information in the Bible.

Educators in uni and schools, scientists, philosophers, and arts grads and students.

I appreciated the keynote addresses from Jennifer Wiseman and Peter Harrison particularly; the worship sessions; also a number of the shorter parallel sessions; the greater number of attendees with a greater age range than in most previous COSACs, and the venue.

Suggest get science fiction experts to present.

A little disappointed at the end by the lack of respect shown to those who take other views of creation.

Good to have minibus shuttle.

I am unhappy with the Worship component of COSAC. It is dominated by what I shall call a “Protestant” way. This is not necessarily a negative, but there was no space for a more “traditional” Eucharistic ceremony. For example, could Rev Stephen Ames have done an Anglican Mass on Palm Sunday?

I would like to see some of the Teilhard de Chardin and the modern uptake of that. I missed that whole tradition.

It is all very welcoming but the culture is solidly evangelical and male. It would be nice to see a more diverse culture which would include people outside of evangelicalism and which was more hospitable to women. I have not heard so much male gender language in three days for a very long time!!

ISCAST plays a very important role in seeking to educate church and the wider community to see a positive link between Christianity and science in the face of a good deal of misinformation and opposition to science.

My first conference and very worthwhile. Agree with bringing school students along and comments from two of them at final session very impressive.

The awesome interaction of Science and Faith I have never experienced before! Purposeful science, earnest devotions, heartfelt worship... with a generous sprinkling of humour! The general academic world can surely learn from ISCAST. Absolute best bit was the podcast/radio recording with the three astronomers – highly entertaining, engaging, educational.

More time for discussion - many of the parallel sessions felt rushed with little time for dialogue.

Reintroduction of the fun Saturday night.
Apologetics in a post-everything age

Presenter
Robert Martin

Abstract
The world has changed. We live in a post-everything, post-modern, post-Christian, world. This has implications for Christian apologetics. How do we do apologetics in a secular world of social media and a lost Christian foundation? In this presentation Robert will outline the key tenets of the secular age and share how we can engage with a thoughtful, reasoned, persuasive Christian apologetic.

The mathematics of forgiveness

Presenters
Cosimo Chiera and Thomas Edwards

Abstract
Abundant, if not heroic, forgiveness is one of the foundational charges of Christianity. Yet our understanding of how to bring this about is often clouded by a diversity of factors including our upbringing, social pressures, one's ability for distress tolerance, our capacity to generate empathy and even to manage fear. Moreover, who requires forgiveness? When great harm is done there are often multiple parties injured such that forgiveness needs to be offered to others and even to one's self.

The anthropocene era in a Trinitarian frame: Reflections on Clive Hamilton's Defiant Earth

Presenter
Ian Barns

Abstract
The recent publication of Defiant Earth by Australian public intellectual Clive Hamilton is an important reflection on the emerging role of earth system sciences as a trans-scientific framework for the task of global governance in response to the advent of the Anthropocene. Hamilton has been an active contributor to recent debates about the naming, timing and appropriate responses to the Anthropocene.

Living with ‘assisted dying’: An introduction to the issues and ethics of voluntary euthanasia and assisted suicide in Australia

Presenter
Denise Cooper-Clarke

Abstract
In the public debate, opponents of ‘assisted dying’ relied heavily on consequentialist arguments (the risk to the lives of the vulnerable), while proponents argued on the basis of the principles of respect for individual autonomy (the ‘right’ to choose) and of the obligation to relieve suffering, mainly through emotive appeals based on anecdotes of ‘bad deaths’. This strategy enabled proponents to win over both public opinion and the parliamentary vote, despite the strong opposition of doctors as expressed by the AMA. Arguments on the basis of the principles of the sanctity of human life and of biblical justice were largely missing.

A sense of total depravity: Secular responses to exploring the ‘final frontier’

Presenter
Jonathan Clarke

Abstract
Public discussions about the future of space exploration have revealed a consistent pattern in opposition from segments of the wider community. These often combine a view that space exploration and settlement will only spread greed and destruction through the universe with a sense that current humanity has no place in the cosmos beyond Earth. The first position appears to combine a strong sense of total depravity without a sense of grace. The second position is often associated with a lack of vision or potential and an exaggerated perception of risk.

Teaching warfare: The perpetuation of science-religion conflict in modern university textbooks

Presenter
Tom Aechtner

Abstract
The idea that science and religion are in a constant state of warfare is a narrative that has been actively challenged by historians for several decades. Nevertheless, the conflict model persists in various academic disciplines, and it is still frequently presented to university students as the authoritative account of religion-science history.

From Eden to interstellar space: Radical departures form the familiar, to reality at the boundaries of the thinkable

Presenter
Sarah Beattie

Abstract
This paper will explore the theme of radical departure from the familiar as a hermeneutical approach to biblical narrative in order to examine biblical perspectives of reality and their relationship to contemporary perspectives of cosmology and consciousness.
