

Dr Alastair Richardson

School of Zoology, University of Tasmania

Qualifications

BSc (Hons) Exeter 1969, PhD Exeter 1972

Profile

I am an Honorary Research Associate at the University of Tasmania, where I lectured in the School of Zoology from 1972 to 2008. I am generally interested in invertebrate ecology and systematics, and particularly in the ecology, taxonomy and biogeography of terrestrial crustaceans.

Science/Faith interests

As a teacher and researcher in evolutionary biology I am interested in reconciling scientific accounts of origins with those in the Bible. I would like to understand the "goodness" of creation in the face of predation, parasitism and other species interactions that pervade the natural world.

Topics for talks to church, school and campus groups:

I am willing to present to school and university students on evolution and Christianity.
